

FOR INCREASING FLEECE, FRAME and FERTILITY

**Come and see us at our Field Day on
Wed July 10th and join us for lunch
or between 10AM – 4PM**

*After 8" of rain over 4 days recently, there
is a fair bit of country underwater, but with
much improved ground cover we will have
excellent grass growing prospects for winter
and early spring*

**NO SELF FEEDERS
or SHEDDING USED
JUST GOOD
GENETICS AND
A BANK OF GRASS.**

MAKING THE MOST OF YOUR GENETICS

**What do you see as the key profit drivers
in your sheep?**

**Holmes and Sackett AgInsights
identify wool and dual purpose flocks as
having double the returns of prime lamb
and beef over 74 businesses.**

So how do they achieve this?

**Adding value to your surplus sheep
Focusing on wool quality and weights
Breeding larger animals
Achieving high fertility rates**

**We look forward to showing you our
Kerin Poll genetics on show, for breeding
big, plain, fertile and fat 19 micron
merinos**

**Contact: Rick Robertson
51577516 or 0407 777516**

gracemere.merinos@bigpond.com

**Sale rams will be
available from early
September.**

***This is an example of the stud sires we are using – 18 micron and 95kg. They will
be on display***
